enzie[®]

Award Winning space saving spiral stair using stainless steel and your selection of beautiful Australian Timber.

Giving you the opportunity of choosing your steel finish and timber combination.

enzie® Steel Spiral Stair System

The quality, custom-made **enzie®** staircase is more than a product or service; it is a system that provides safe, space saving access assuring long-term value. **enzie®** has been Australia's best-known name in spiral staircases since 1974, and has won a string of prestigious awards. (The Australian Design Award, BHP Award for Consumer Products and finalist for Prince Phillip Prize for Australian Design.) From your drawings, sketches plans or a site visit, qualified **enzie®** staff provide a free design service ensuring the most appropriate stair is used for your needs.

The new stainless steel and timber spiral stair.

The new **enzie®** stair is the same system offering exciting materials to keep pace with customers desires. It is manufactured from enduring stainless steel and the beautifully sculptured treads are made from your choice of Australian timber.

Safety

The curved nature of spiral stairs provides a handrail in front of you whilst moving up and down the staircase. Antiskid treatment on the tread prevents slipping. The Victorian Accreditation Certificate issued under the BCA, and approval from Absac (CSIRO) further endorses the safety, design and quality of the system.

Space saving

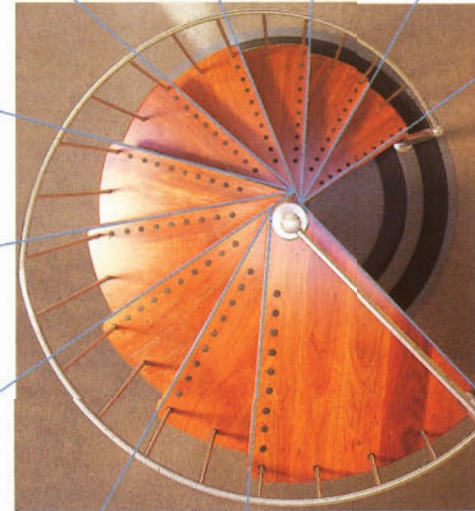

The use of steel enhances the design, the slender central column and handrail allows for more efficient use of space by providing greater width for access. The staircases, available in 1300mm, 1500mm, 1750mm and 1880mm diameter, are designed for modular construction, and can be assembled to curve to the left or right of the central column to maximize space.

Strength and durability

Made from steel for strength and stability, the staircase is structurally independent between levels.
